

AMENDMENTS TO THE CLAIMS

1. (Previously presented) A computerized file management system for use with an existing file system, that includes a volume, and for managing electronic files on the volume, the computerized file management system comprising:
 - a volume manager configured to manage the electronic files on the volume and to manage metadata relating to the electronic files on the volume;
 - a coherency manager module coupled to the volume manager and configured to manage at least one of i) a version of a selected file of the electronic files and ii) a relationship of the selected file of the electronic files, to another file, based on the metadata associated with the selected file; and
 - a workflow module coupled to the volume manager and configured to automatically perform an event-driven action corresponding to a trigger event in response to the trigger event occurring;
 - wherein the trigger event relates to at least one of i) a change to the metadata of the selected file, ii) a change to the content of the selected file, and iii) a file operation of the selected file; and
 - wherein the event-driven action provides automated handling of at least one of folders, the electronic files, and the metadata relating to the electronic files.
2. (Original) The system of claim 1, wherein the metadata includes automatically generated metadata and user defined metadata.
3. (Canceled)
4. (Canceled)
5. (Previously presented) The system of claim 1, wherein the workflow module is configured to facilitate sharing and access control of content.

6. (Previously presented) The system of claim 1, wherein the metadata includes at least one tag wherein the workflow module is configured to initiate actions based on changes to a value of the tag.
7. (Original) The system of claim 1, wherein the system uses tags to control or specify workflow.
8. (Previously presented) The system of claim 7, wherein further comprising a user interface configured to allow a user to view or change the tags.
9. (Previously presented) The system of claim 1, wherein the system is configured to track movement and use of the files.
10. (Previously presented) The system of claim 1 wherein the event-driven action is at least one of an update to an enterprise application and an update to the file system by the enterprise application.
11. (Previously presented) The system of claim 1, wherein the event-driven action is approval.
12. (Previously presented) The system of claim 1, wherein the event-driven action is computing a hash code.
13. (Previously presented) The system of claim 1, wherein the event-driven action is enabling a further action to occur.
14. (Previously presented) The system of claim 13, wherein the enabling comprises removing a constraint that inhibits the further action.
15. (Previously presented) The system of claim 1, wherein the event-driven action is enabling a user programmed action.

16. (Previously presented) The system of claim 1, wherein the event-driven action is a predetermined system action.
17. (Previously presented) The system of claim 1, wherein the event-driven action is notifying a user when a file is ready for an action by the user.
18. (Previously presented) The system of claim 17, wherein the action by the user is sign-off.
19. (Previously presented) The system of claim 17, wherein the action by the user is review.
20. (Previously presented) The system of claim 17, wherein the action by the user is publish.
21. (Original) The system of claim 1, wherein a dynamic folder is used to manage workflow.
22. (Previously presented) The system of claim 1, wherein the metadata includes one or more tags associated with each of the electronic files.
23. (Previously presented) The system of claim 22, wherein the workflow module is further configured to initiate an event-driven action in response to a change to the one or more tags.
24. (Previously presented) The system of claim 22, wherein the trigger event is a user setting a value of said one or more tags.
25. (Previously presented) The system of claim 22, wherein the event-driven action is changing a value of said one or more tags in response to a change in the associated file.

26. (Previously presented) A computerized system comprising:
- a volume manager module configured to interface with a volume of an existing file system, the volume including electronic files, the volume manager being configured to maintain metadata related to the electronic files and to track aspects of usage by a user of the electronic files;
- wherein the volume manager module is configured to publish information related to usage of the electronic files;
- wherein the volume manager module is configured to facilitate a historical view showing usage of the electronic files;
- wherein the volume manager is configured such that the electronic files are inhibited from leaving control of the system;
- a coherency manager module coupled to the volume manager and configured to interface with the existing file system and the volume manager, the coherency manager module being configured to facilitate coherency between selected ones of the electronic files using the published information;
- a workflow module coupled to the volume manager and configured to receive the published information and to automatically perform an event-driven action in response to a trigger event occurring; and
- a user interface module coupled to the volume manager module and configured to provide an interface between the user and the existing file system;
- wherein the trigger event relates to at least one of i) a change to the metadata of the selected files, ii) a change to the content of the selected files, and iii) a file operation of the selected files; and
- wherein the event-driven action provides automated handling of at least one of folders, the electronic files, and the metadata relating to the electronic files.

27. (Canceled)

28. (Previously presented) The system of claim 26 wherein the volume manager module and the workflow module have a publish/subscribe relationship.

29. (Previously presented) The system of claim 26 wherein the volume manager is configured to interface with a plurality of volumes of the file system.
30. (Previously presented) The system of claim 29 wherein the coherency module is configured to facilitate coherency between selected files stored in a first one and a second one of the plurality of volumes.
31. (Previously presented) The system of claim 26 wherein the event-driven action is at least one of approval, computing a hash code, a user programmed action, a predetermined system action, and notifying a selected user when a file is ready for action by the selected user.
32. (Previously presented) The system of claim 26 wherein the volume manager is configured such that the electronic files never leave control of the system.
